Introduction

Agricultural workers are exposed to a wide range of occupational and environmental health hazards. In this study, we analyzed injury claims among workers in Crop Production, Animal Production, and Support Activities for Crop Production and Animal Production in Florida from 2010-2019.

The aims of analyzing these claims are: - to understand spatial and temporal distribution of nonfatal injuries

- to highlight their causes so that future incidents can be prevented.

Methodology

Workers' Compensation data from 2010 -2019 was compiled by the Florida Department of Financial Services' Division of Workers' Compens ation. Data includes date of accident, injury resulted in death, nature of accident, body part, cause of injury, city, state, county, zip code, and 6digit NAICS (North American Industry Classification System) codes. Data analysis was done using Microsoft Excel and maps were developed using Tableau Desktop.

- Crop Production: 8351 nonfatal, 32 fatal
- Support Activities for Crop Production: 2453
 nonfatal, 12 fatal
- Animal Production: 3947 nonfatal, 3 fatal
- Support Activities for Animal Production: 315
 nonfatal, 1 fatal

Crop Production & Support Activities for Crop Animal Production & Support Activities for Animal Production Production 92 66 109 12 22 1 1 22 1 1 1019 8 2 1 12 54 14 152 30 20 580 732 115 161 1,288 . 4 126 6 899

Cause/ Event Categories of Injuries in Agricultural Workers				
Fall, Slip or Trip Injury	26%	30%	20%	25%
Strain or Injury By	24%	23%	40%	19%
Miscellaneous Causes	14%	14%	7%	3%
Struck or Injured By	13%	12%	19%	
Caught In, Under or Between	6%	4%	4%	4% 44%
Cut, Puncture, Scrape Injured By	6%	7%	2%	2%
Motor Vehicle	5%	5%	2%	1%
Striking Against or Stepping On	4%	3%	4%	2%
Burn or Scald - Heat or Cold Exposur	2%	1%	2%	1%
	Crop Production	Support Activities for Crop Production	Animal Production and Aquaculture	Support Activities for Animal Production

Conclusion

Key findings:

- There were far more injuries in the crop production sector compared to the crop support sector. However, the injury rates were similar across the 10-year period.
- Injury rates for full-time workers in animal production were significantly higher than the rates for contracted workers in the same sub-sector.
- There is a higher concentration of injuries in North Florida for animal production & its industries than there are for Crop Production & its Industries in that region.
- There is a higher concentration of injuries in South Florida for crop production & its industries than for animal production & its industries.
- The primary causes of injuries in the crop production and crop production support industries were falls, slips, and trips in the workplace. In the animal production and animal production support industries, the primary causes were strains and striking injuries, respectively.

Acknowledgements

This report was made possible through the support of the mentors Dr. Serap Gorucu, Dr. Sebastian Galindo, Dr. Glenn Israel, Dr. David Diehl, and Cassandra Ward from the Southeastern Coastal Center for Agricultural Health and Safety Evaluation Team.

The authors would also like to thank the University of Florida Active Learning Program for allowing undergraduate students to participate in their internship program for the Summer 2021 semester, which allowed them to work on this project.
